Pesadilla Verde

Director (design): Evan Derrick **Director of Photography (art):** Agnieszka Dabrowiecka

"Deep in the heart of South America lies a stretch of jungle where the air is oppressive like a thick, rotten blanket and the canopy seals out the sun so completely that the trees live in perpetual twilight. The undergrowth is tangled and wet, vines dangling like nooses, and the locals whisper of paths that shift and close behind them. Those who venture in too deep often vanish without a trace—no tracks, no remains, just an unsettling emptiness left in their place—feeding the legend that some terror in that suffocating green wilderness is watching, waiting, and choosing its prey."

— From the introduction to *A History of the Green Terror,* by *Dr. Archibald Schwartz*

COMPONENTS

1 Location board

4 Action cubes

4 Action Upgrade Tokens

4 Ability Upgrade Tokens

10 Event cards

5 Setup cards

18 Item cards

8 Terror cards

2 Action cards

1 Soldiers card

5 Various Tokens

SPECIAL SETUP

- Place the **Huey** token in the **Clearing** space.
- Place the **Train Action** cards into the **Action Tableau**.
- Place the **Soldiers** card and the **Action** cubes next to the play area. Take the **8 Upgrade** tokens and place them on the card. The **2** starting **Upgrades** (indicated with the icon) should be placed on their **Unlocked** side. The remaining **6 Upgrade** tokens should be placed on their **Locked** side (indicated with the icon).

*The **Soldiers** card and **Upgrade** tokens.*

SPECIAL RULES

THE SOLDIERS

Every normal **Victim** is a **Soldier**, deployed to the conflict zone of **Pesadilla Verde** and eager to fight! They act like normal **Victims** for almost all game effects. Unlike normal **Victims**, **Soldiers** WILL follow you into the **Killer's** space and they can be given orders (see *Ordering Soldiers*).

UPGRADES

There are two types of **Upgrades**: **Action Upgrades** (indicated by tokens with blank squares) and **Ability Upgrades** (those without squares). At the beginning of the game, **Soldiers** only have access to two **Action Upgrades**: moving and attacking. However, the **Train Action** card can be used to **Unlock** additional **Upgrades**.

When you **Unlock** an **Upgrade**, choose an **Upgrade** token and flip it from its **Locked** side to its **Unlocked** side. If a game effect tells you to **Lock** an **Upgrade**, flip it from its **Unlocked** side to its **Locked** side.

There are **4 Action Upgrades**, indicated by the tokens with blank squares:

*An **Action Upgrade** token.*

- **Attack**: You begin the game with one of these **Unlocked** and one **Locked**. Using this **Action** will allow a **Soldier** or group of **Soldiers** to attack **Enemies** in a space up to their range.
- **Move**: You begin the game with one of these **Unlocked** and one **Locked**. Using this **Action** will allow a group of **Soldiers** to move **1** space.

There are **4 Ability Upgrades**, indicated by the tokens WITHOUT any squares:

*An **Ability Upgrade** token.*

- **Saving Soldiers**: **Soldiers** are very stubborn and do not want to be "rescued." They want to fight! At the start of the game it costs **2** to save a **Soldier**. If **Unlocked**, you can save **Soldiers** for no time loss.
- **Friendly Fire**: At the start of the game, your **Soldiers** are not very skilled. Whenever you use an **Attack** action, they will potentially shoot one another. Roll a die for each **Soldier** involved in the attack. On a roll of **1-2**, you must kill one of the **Soldiers** involved in the attack. If **Unlocked**, there will no longer be any friendly fire when they attack.
- **Attack Range**: At the start of the game, **Soldiers** can only attack their current space. If **Unlocked**, they can attack either their current space or an adjacent space.
- **Damage**: At the start of the game, when **Soldiers** attack they do equal to the number of **Soldiers** divided by **2**, rounded DOWN. This means that a single **Soldier** by itself cannot do any damage, and three **Soldiers** together can only do **1**. If **Unlocked**, when **Soldiers** attack they will do equal to the number of **Soldiers** divided by **2**, rounded UP. Now a single **Soldier** will do **1** and three **Soldiers** together will do **2**.

ORDERING SOLDIERS

Soldiers can be ordered to take **Actions** during the **Action** phase as follows:

- Select the space with the **Soldier** or **Soldiers** to be ordered.
- Choose an **Action Upgrade** token (the tokens with blank squares) and place an **Action** cube on the leftmost space. An **Action** is not available if there's already a cube in the row for that **Action**.
- Resolve the **Action** for all **Soldiers** in that space.

During the **Upkeep** phase, move all **Action** cubes one space to the right, removing them from the **Action Upgrade** token when they leave the last space. Once a cube has left the token it is available again to use.

Note! The Archeologist and the **Rebel Leader Special Victims** are NOT considered **Soldiers** and cannot be ordered to take **Actions**!

*Mike wants to order a group of three **Soldiers** to attack the **Killer**. Their **Range** ability is still locked, however, so he'll have to move them one space into the **Upper River.** While one of his **Attack** actions is unavailable (he used it on a previous turn) and he hasn't unlocked his second **Move** action, he fortunately has one **Move** and one **Attack** action free.*

*He places an **Action** cube onto the free **Move** action and moves the **Soldiers** one space. Then, he places a second **Action** cube onto the free **Attack** action. Because he unlocked the **Damage** ability, the **Soldiers** do*  *to the **Killer.** Then, because Mike hasn't unlocked the **Friendly Fire** ability, he has to roll three dice, one for each **Soldier**. Fortunately he rolls a **3**, **5**, and **6**; the **Soldiers** do not inadvertently shoot one another (this time).*

THE HUEY

The space with the **Huey** token is considered a space. When you are in the same space as the **Huey**, you can save any number of **Victims** there. Then, remove the **Huey** token from the board, revealing the **Clearing**, which is not a space. Unless a game effect returns the **Huey** token to the board, you will not be able to use it to save **Victims** again.

THE RIVER

There are four **River** spaces on the board: the **Waterfall**, the **Upper River**, the **Central River**, and the **Lower River**. When moving downriver (following the arrows), you can move to any space on the **River** with a movement of **1** space . For example, if you're at the **Waterfall** and resolve a **Walk Action** card with a single success, you could move all the way to the **Lower River** if you wished. When moving from one **River** space to a non-adjacent **River** space, you are considered to be passing through all spaces in between and must resolve any effects on those spaces.

*You can move from the **Waterfall** to the **Upper River** (with the arrow), but not in the other direction (against the arrow).*

River movement also applies to **Soldiers** but not to **Enemies**. In other words, when ordering **Soldiers** to move on the river, they may move across multiple **River** spaces for **1** space of movement. **Enemies**, however, can only move downriver to an adjacent **River** space.

No one (you, **Victims**, or **Enemies**) can move upriver against the direction of the arrows. However, the space upriver is still considered adjacent.
