ISLA LAGARTO

Director (design): Byron Jorjorian and AJ Porfirio **Director of Photography (art):** Tyler Johnson
Board and Item Art: Agnieszka Dabrowiecka

An island of prehistoric proportions. Let the games begin!

COMPONENTS

1 Location board

3 Lava cards

4 Lava tokens

10 Event cards

16 Item cards

1 T-Rex card

6 various tokens

1 T-Rex Action token

5 Setup cards

8 Terror cards

1 Electric Fence die

3 Electric Fence markers

1 T-Rex meeple

SPECIAL SETUP

- Place **Electric Fence** markers in the green sections indicated on the **Setup** card. Do not place **Electric Fence** markers in the red sections.
- Shuffle the **3 Lava** cards and create a facedown deck. Place the **Lava** tokens next to the deck.
- Place the **T-Rex** card near the play area and place the **T-Rex** meeple on the start space.

*For example, if this was the **Setup** card drawn, you would place an **Electric Fence** marker on section **A** and Section **C**. Section **B** would remain empty.*

SPECIAL RULES

ELECTRIC FENCES

The power to each electric fence fluctuates to keep the games exciting!

There are three **Electric Fences** (A, B, and C).

While an **Electric Fence** marker is present, movement on the path is blocked and the spaces on either side of the fence are NOT considered adjacent.

- **Panic** - if anyone panics in a direction blocked by a fence, they simply stay in their current space.
- **Farthest/Closest** – when determining distance to a space or target, only use paths that are not blocked by **Electric Fence** markers. If all markers are on the board and the only space or target is on the other side of the fences, determine distance as if there were no **Electric Fence** markers.
- **Enemy Targeting** – if there is no unblocked path between an **Enemy** and its target, then the **Enemy** will not move as part of that action. Attack icons will still be resolved in the **Enemy's** space.
- **Placing someone** – effects that place someone are not affected by fences.

During each **Upkeep** phase, the fence power fluctuates. Roll the **Electric Fence** die to determine which fence is affected. If there's an **Electric Fence** marker already there, remove it from the board. If there isn't an **Electric Fence** marker there, place one.

T-REX

The **T-Rex** begins the game secured in the **Dino Pen** but it may eventually break free!

When you see the icon, move the **T-Rex** meeple one space to the right on the **T-Rex** card. When the **T-Rex** reaches the **"Break out!"** space, place the **T-Rex** meeple on the board in the **Dino Pen,** and place the **T-Rex Action** token below the **Killer Action** on the **Finale** card. Ignore any subsequent icons as the **T-Rex** is now in play.

The **T-Rex** is NOT considered a **Killer** or a **Minion** and cannot be attacked, damaged, or killed. After resolving the **Minion** and **Killer Actions** on the **Finale** card, resolve the **T-Rex Action**.

Victims will not follow you into the **T-Rex's** space (unless there is an effect that allows them to follow you into the **Killer's** space). During the **Panic** phase, everyone in the **T-Rex's** space panics, regardless of whether or not a **Victim** was killed that turn.

Moving ANY

The **T-Rex's Movement Value** is on the **T-Rex** card (it's a **2**). While moving, the ANY icon means the **T-Rex** will stop moving as soon as it reaches a space with ANYONE (e.g. you, **Victims**, **Enemies**, etc.). It will also NOT move if anyone is in its starting space.

Killing

The **T-Rex** doesn't attack like a normal **Enemy**. Instead of doing damage, the **T-Rex** instantly KILLS one target in its space! If there are multiple targets, it will kill ONE of them using the following priority: **Victim**; **Minion**; **You**; **Killer**. If you or the **Killer** were attacked by the **T-Rex**, you (or they) are instantly killed; do not reveal any **Final Health** tokens.

Note! For **Enemies** made up of multiple coordinated units (i.e. **Raptor Pack**, **Zombie Horde**, etc) the **T-Rex** kills ONE unit, which is equivalent to dealing 1 damage to that **Enemy**.

VOLCANO

The first time you resolve a icon, the volcano erupts! Follow these steps:

1. Everyone at the **Volcano** takes .
2. Anyone left in the space panics.
3. Place the **Volcano Lava** token in that space on the board. It is no longer accessible to anyone!

When you resolve subsequent icons, the lava from the volcano will spread to an adjacent space. Draw a **Lava** card to determine which space and follow the instructions on the card.

After all **4 Lava** tokens are on the board, ignore any subsequent icons. Spaces with **Lava** tokens are no longer accessible to anyone.

SPECIAL SPACES

The **3** spaces at the corners of the **Location** board marked with this icon are **Beach** spaces (some card effects will refer to these spaces).

The **2** spaces at the edges of the **Location** board marked with this icon are **Cliff** spaces (some card effects will refer to these spaces).
