RAPTORS

Director (design): Byron Jorjorian and AJ Porfirio **Director of Photography (art):** Tyler Johnson

The raptors were built for speed, agility, and sudden violence. Their sickle-shaped toe claws are designed to slash and pin prey, turning a single leap into a mortal wound. With sharp teeth and powerful jaws, they can tear flesh quickly once they've closed the distance. Hunting in coordinated groups, they overwhelm victims through intelligence and relentless pursuit rather than sheer size. A raptor doesn't need to be big to be deadly—it only needs a moment of surprise.

COMPONENTS

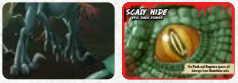

3 Finale cards

1 Epic Finale card

3 Dark Power cards

1 Epic Dark Power card

1 Pack Meeple

2 Final Girl cards

16 Terror cards

6 Raptor Meeples

1 Killer board

1 Raptors card

8 Spawn cards

SPECIAL SETUP

- Shuffle the **Spawn** cards and form a face down deck. Place it near the play area along with the **Raptors** card and place the **Raptor** meeples on the **Raptors** card.
- Place the **Pack** meeple on the **Killer** starting space indicated on the **Setup** card. It is used instead of the **Killer** meeple from the **Core** box.

SPECIAL RULES

THE PACK

The **Pack** meeple represents a large and coordinated group of **Raptors.** The **Pack** is considered a **Killer** for all purposes.

The health of the **Pack** represents the number of **Raptors** in the **Pack**. **Health** starts the game at **5** (one **Final Health** token and **4 Health** markers), but there is no upper limit. The **Attack Value** on the **Killer** board represents how much damage the **Pack** does in a single attack, regardless of the size of the pack.

When the **Pack** is eliminated, you win, even if there are still individual **Raptors** on the board.

INDIVIDUAL RAPTORS

Individual **Raptors** are represented by the **Raptor** meeples. When a card refers to **'Raptor(s)'** for an effect, that effect does NOT include the **Pack**, only the individual **Raptors**. Similarly, when a card refers to **'Pack'** for an effect, it does not include individual **Raptors**.

Raptors are considered **Minions** for all purposes (familiarize yourself with the **Minion** rules on **pg. 32** of the **Core Rulebook**).

- Individual **Raptors** have **1** health.
- They use the **Movement Value** on the **Killer** board.
- Individual **Raptors** don't attack very often, but when they do, they EACH attack individually for **1** .

JOINING THE PACK

Raptors are generally trying to move to, and join, the **Pack**. When you see the icon, the **Raptors** are targeting the **Pack** for movement.

Raptors know they are at risk when not with the **Pack**, so when moving they will stop any time they enter (or begin movement in) a space with you or a **Victim**. This is reflected by the icon as a reminder.

Note! Location Terror cards will not have this icon, but it still applies when individual **Raptors** resolve the icon!

When targeting the **Pack**, the **Raptors** will take the shortest path to reach it. If there are multiple equidistant paths, the **Raptors** will choose the path that gets them as close to the **Pack** as possible before having to stop their movement.

When individual **Raptors** are in the same space as the **Pack**, they automatically and immediately join it. Simply remove the individual **Raptors** and add one **Health** marker to the **Pack's** health for each one that joins.

When **Raptor** meeples are removed from the board, place them on the **Raptors** card to be used again for future spawns.

SPAWNING RAPTORS

When you resolve an icon, you must draw a **Spawn** card and spawn the indicated number of individual **Raptors**. The space they spawn in is determined by rolling a die and referring to the spawn table on the **Raptors** card. If there are multiple legal spawn spaces, you may choose where to spawn the **Raptors**. Then, discard the **Spawn** card.

- Spawns cannot occur in spaces that are no longer accessible.
- If there are not enough **Raptor** meeples to resolve the spawn, the **Raptor** closest to the **Pack** immediately joins it, and then use that **Raptor** meeple for the spawn. Repeat this until the **Spawn** card is fully resolved.
- If you ever need to draw a **Spawn** card and none remain, shuffle the discard pile to create a new deck and then draw.
- The final effect on the **Bloodlust** track will also spawn a **Raptor**. Resolve this as if you had drawn a **Spawn** card with a value of **1**.

Note! If a **Raptor** spawns during the **Killer** phase, it will not activate until the NEXT **Killer** phase.
